

The right notary. At the right time.

Start with urgent deadlines. Become the workflow behind notarial practices.

Urgency opens the door.
The workflow builds recurring use.

One experience, from client need
to the act signed by the notary.

Three development stages. AI and integrated signing depend on each stage's validation.

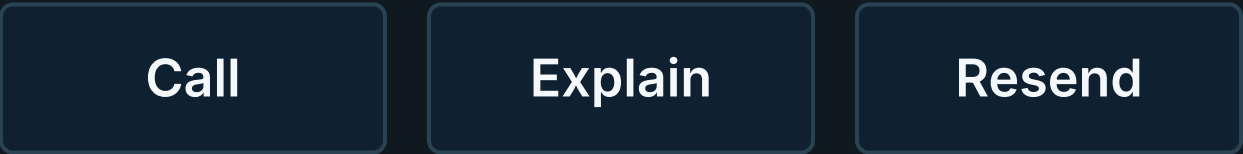

The deadline moves closer. The file waits.

The friction sits between the client's request and the practice's workflow.

THE CLIENT

A deadline to meet.

Calls to make, documents to send,
a professional to find.

THE PRACTICE

Capacity to unlock.

Availability that is hard to discover.
Incomplete files that need rework.

Nota connects the need to usable capacity.

Illustrative scenario to validate through interviews and a pilot. No measured customer delay is claimed.

Turn an urgent need into an appointment.

Financing and refinancing first, in the Québec City region.

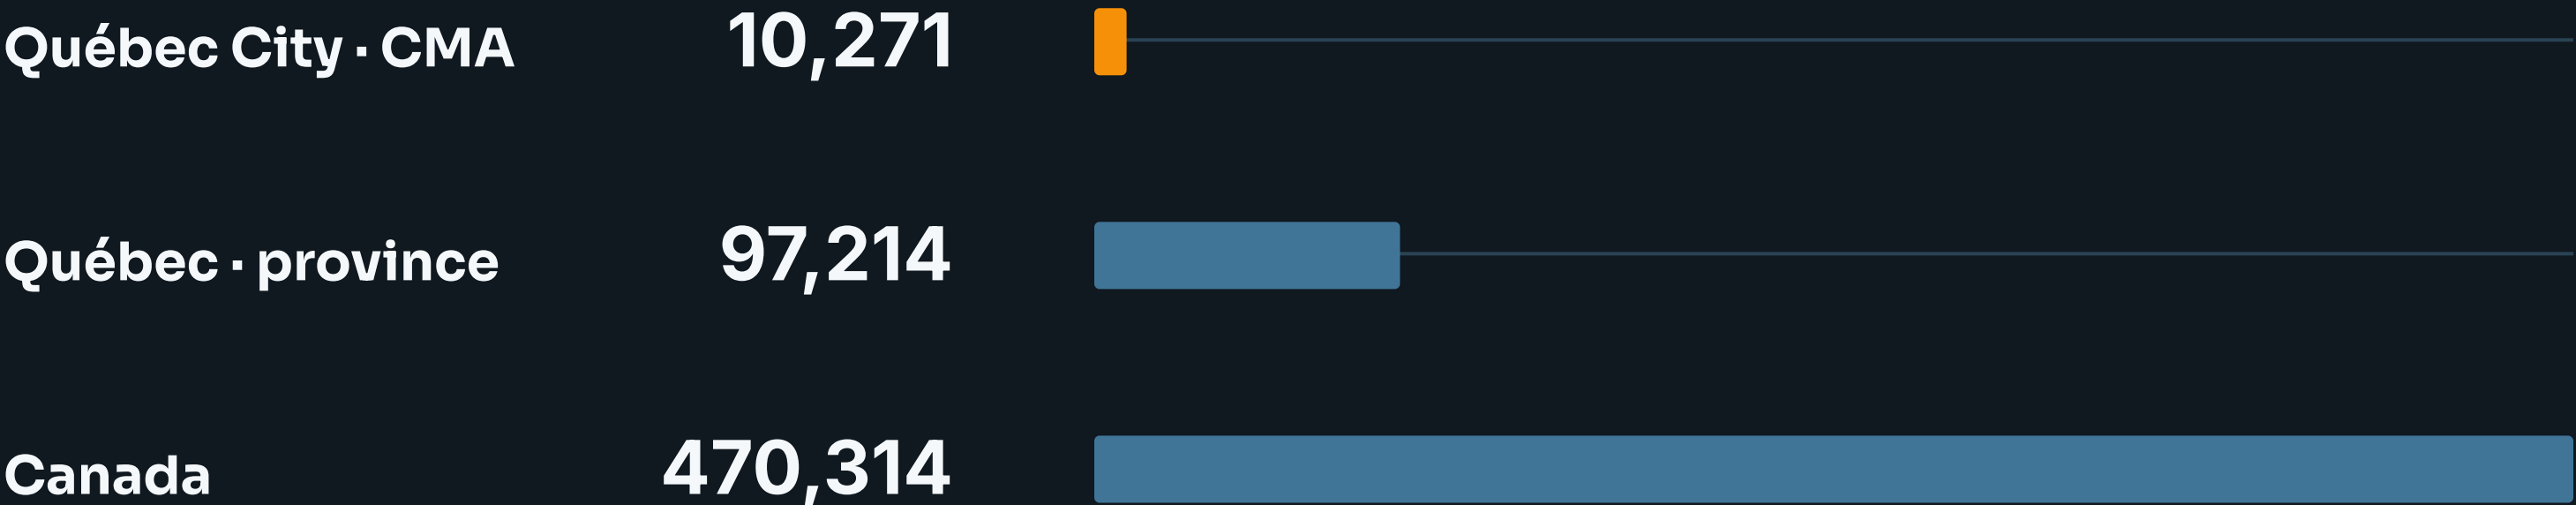

Measure: response time · retained requests · acts completed on time

The notary confirms eligibility and feasibility. A requested date is not a signing guarantee.

A local entry point. A national base.

Real estate financing provides a measurable starting pool of notarial needs.

Same unit: recorded residential sales in 2025.

Centris in Québec; MLS across Canada. Nested areas must not be added. These are not all eligible urgent files.

The market is won one file at a time.

A transparent example based on sales in the Québec City region.

Sensitivity to the qualifiable share:

5% → 103 acts 10% → 205 20% → 411

All three rates are planning assumptions to test locally.

Illustrative annual sale-linked financing scenario, separate from the Y1 forecast of 244 acts including refinancing.

The ambition goes beyond matching.

An international professional base for stages 2 and 3.

2,659

notaries in Québec

In traditional legal practices.
March 31, 2025.

≈ 50,000

notaries across the EU

22 CNUE member notariats.
2024 report.

93

member notariats

The UINL’s worldwide network.
Accessed September 2026.

Preparation software can serve recurring files beyond urgent requests.

Individuals, not customer firms. Different scopes: no global total or accessible revenue is inferred from these figures.

Give practices their time back.

A precise ambition: automate repeatable work, with notary review.

80 %
of repeatable preparation

Target reduction in human time

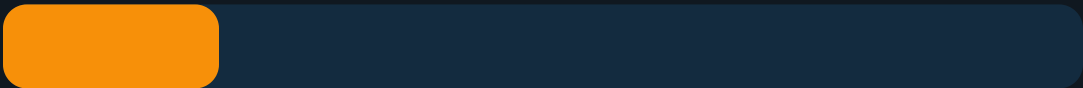

Collect → extract → check → assemble.
The notary advises, decides and approves.

NORMALIZED TIME · BASE 100

Manual preparation 100

With Nota · target

20

Review and corrections included
in the measured saving.

80% is an unproven target for the defined repeatable scope, not a measured 80% reduction across the entire profession.

Every correction can make the tool better.

Practice expertise becomes an evaluated product improvement.

A documented, approved and reversible improvement loop.

Authorized data only. No automatic training on identifiable client files; no autonomous legal decisions.

Complete the act in one continuous workflow.

Connect authorized signing methods to the file already prepared.

The value: keep the file connected all the way to completion.

Electronic notarial signing already exists. Nota must validate its integrations; remote signing remains regulated.

Win through continuity of the file.

The date signal attracts demand; the integrated workflow aims to retain users.

Signing and preservation

Complete and preserve evidence

NOTA POSITIONING

**Connect
all three.**

Demand → preparation
→ completion.

Intended advantage, to be proven through usage. The CSN announced an AI partnership in July 2026: the ecosystem is already innovating.

Concentrate supply before accelerating.

One region, two initial services and a cohort we can actually serve.

30

recruited notaries

In a focused first cohort.

25

verified notaries

With verified capacity and workflow.

244

completed acts in Y1

Financing and refinancing.

Mortgage brokers · local search · compliant referrals

Management targets, not achieved traction. Define active capacity; verify referral terms before any compensation.

The product makes the pilot concrete.

A built foundation to test demand, quality and real economics.

BUILT INTO THE PRODUCT

A demonstrable workflow

Dated request · notary offer
Assisted preparation · signing rehearsal

TO PROVE IN THE PILOT

Repeated use

Actually paid and completed files
Time saved · quality · retention

Demos demonstrate the workflow. Cohorts will demonstrate the market.

No verified commercial revenue or volume is supplied here. Demo data and tests are not traction.

Monetize the service, then recurring use.

Average economics per completed act in the plan's current model.

\$331

Nota revenue

Average of the assumed mix

-

\$145

variable costs

Payments, support and losses

=

\$186

contribution

Before fixed costs and acquisition

Next: software subscriptions and integrated signing, to price and validate.

Rounded CAD. Assumed mix and costs; commercial model subject to review. Notary fees are excluded from Nota revenue.

An explicit ramp that needs funding.

Growth depends on capacity, adoption and available capital.

YEAR 1	YEAR 2	YEAR 3
244 completed acts	2,800 completed acts	11,000 completed acts
\$80,813 Nota revenue	\$927,360 Nota revenue	\$3,643,200 Nota revenue
-\$204,623 operating result	-\$200,496 operating result	\$194,851 operating result

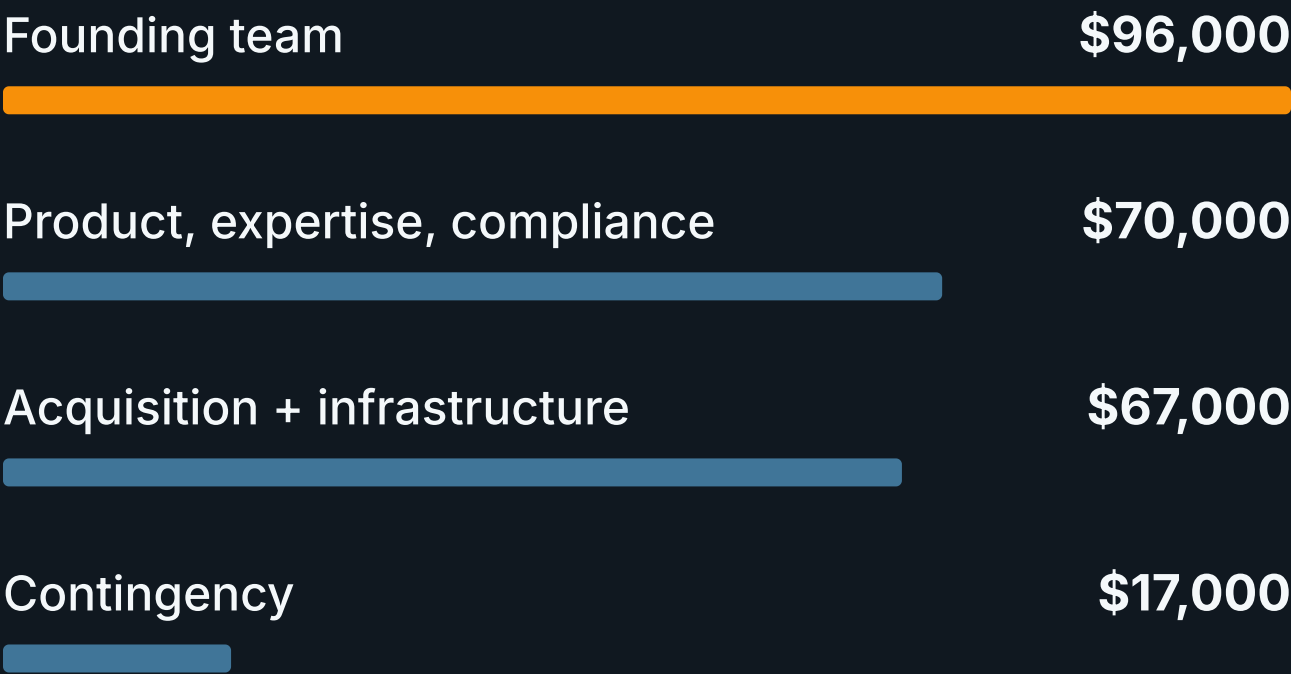

Scenarios, not validated forecasts. Y3 needs ambitious provincial expansion; AI and signing revenue is not included.

Fund the proof that unlocks what comes next.

A 12-month operating envelope allocated according to the plan.

\$250,000
to launch the pilot

- Obtain approvals.
- Serve a real cohort.
- Measure preparation savings.

Base scenario: \$45,377 at Y1 end; at least \$180,119 in additional capital before unmodeled obligations.

An urgent entry point. A lasting ambition.

Nota aims to expand the profession's capacity, together with notaries.

■ Matching	A request actually fulfilled
■ Automation	Time saved, quality maintained
■ Electronic signing	A completed, traceable file
